Control of Various Insects and Mites Infesting Certain Tree Fruits and Nuts During Dormancy

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Lorsban*-4E insecticide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Lorsban-4E according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Lorsban-4E.

Directions for Use

Location: Statewide.

Crop/Site/Commodity: Almonds, apples, nectarines, peaches, pears, plums, prunes.

Target Pest/Problem: Brown almond mite, European red mite, mealy plum aphid, pear psylla, peach twig borer, rosy apple aphid, and San Jose scale.

Dosage: 4 pints/acre

Dilution Rate: 100 to 750 gallons/acre.

Method of Application: Apply as a dormant or delayed spray. Although application may be made without oil, dormant oil is recommended to enhance the control of pests such as European red mite and brown almond mite.

Recommendations for Lorsban-4E in Combinations with Dormant Oil:

1. In almonds, peaches, and nectarines, use up to 2% of Supreme oil with up to a maximum of 4 gal/acre in almonds and 6 gal/acre in peaches and nectarines.
2. In apples, pears, plums and prunes, refer to the University of California pest management guide for those crops.
3. In orchards with high overwintering populations of European red mite or brown almond mite, use higher spray volumes that allow the use of higher per acre rates of oil.
4. For use of any adjuvant or surfactant, in addition to or as a substitute for supreme oil, contact your local Dow AgroSciences representative.

Frequency/Timing of Application: 1 dormant or delayed dormant application/year.

Field Reentry After Application: 24 hours.

Precautions: Because cold or dry conditions may cause sprays of Lorsban-4E plus oil to infuse trees resulting in bud damage or drop, do not apply until winter rains or irrigation has replenished soil moisture such that bark and twigs are not desiccated.

(continued on back)
Restrictions:
• Do not use more than 1% dormant oil in almond orchards less than 4 years old.
• Do not use more than 4 gallons/acre of dormant oil on almonds.
• Do not use more than 6 gallons per acre of dormant oil on peaches and nectarines.
• Do not use less than 100 gallons of total spray volume per acre.
• Make only one application of Lorsban-4E during the dormant season.
• Do not allow meat or dairy animals to graze in treated orchards.
• Do not apply to almonds in the following counties: Butte, Colusa, Glenn, Solano, Sutter, Tehama, Yolo and Yuba.

Chemigation: Do not apply Lorsban-4E through any type of irrigation system for uses described in this supplemental labeling.
